- copy an XmTabList object 459
- copy Container selection to clipboard 57
- copy links Container selection 58
- copy portion of a compound string 428
- Core 617
- coreWidgetClass 617
- count tabs in list 466
- create a CheckBox compound object 579
- create a compound string 380, 386, 390
- create a compound string, with direction 393
- create a font context 154
- create a font list 137
- create a font list entry 140
- create a font list in thread-safe manner 139
- create a MenuBar compound object 581
- create a new font list 131
- create a parse mapping 286
- create a pixmap 169
- create a PopUpMenu compound object as the child of a MenuShell 587
- create a Print Shell widget 298
- create a PullDownMenu compound object as the child of a MenuShell 590
- create a RadioBox compound object 594

- create a rendition object 330
- create a tab stop 453
- create an input method context for widget 192
- create an `OptionMenu` compound object 584
- create compound string in current language environment 392
- create compound string in current locale 388
- create font list entry in thread-safe manner 143
- create particular widget or object 70
- create pixmap of specified depth 171
- create scaled pixmap 174
- create tab list for compound string table 441
- create the widget tree rooted at a named widget 1082
- create the widget tree rooted at a named widget and override the resources set in the UID file 1085
- `Cursor` 1270
 - set current menu cursor 367
- cut Container selection 59

D

- data format name, get from clipboard 28
- deactivate a protocol 90
- deactivate the `XA_WM_PROTOCOLS` protocol 91
- delete a List item at specified position 224
- delete all items from a list 221
- delete an item/items from a list 222
- delete item from `ComboBox` 48
- delete items from position in list 223
- delete List items at specified positions 225
- delete `SimpleSpinBox` item at specified position 372
- delete the primary selection 519
- deselect all items in a list 226
- deselect item from list 227
- deselect List item at specified position 228
- determine if item is in list 233
- dialog objects, create 74
- `DialogShell` 731
- `Dimension` 1270
- direction, convert from string direction 394
- direction, convert to string direction 97
